

Python tutorial #2

Function & Class 를 학습합니다.

```
def hello():  
    print("Hello World")
```

```
hello()
```

→ Hello World

```
def hello(object):  
    print("Hello " + object + "!")
```

```
hello("cat")
```

→ Hello cat!

```
def mySum(a, b):  
    return a+b
```

```
c = mySum(2, 3)  
print(c)
```

→ 5

```
class Man:  
    def __init__(self, name):  
        self.name = name  
        print("Initialized!")  
  
    def hello(self):  
        print("Hello " + self.name + " !")  
  
    def goodbye(self):  
        print("Good-bye " + self.name + " !")
```

```
m = Man("David")
```

→ Initialized!

```
m.hello()
```

→ Hello David !

```
m.goodbye()
```

→ Good-bye David !
